## COVER STORY

# Cockpit Development

## Improving Processes and Ergonomics

4

Subjects of the cover story are a measuring robot of Ford and the possibilities of optimizing processes. Traditionally cockpits are developed in parallel: suppliers produce the relevant components, the automaker assemble them. New approaches are presented here by Johnson Controls and ThyssenKrupp.

## COVER STORY

**Cockpit Development:**

- 4 The Methodical Measurement and Evaluation of Customer-Relevant Perceived Quality

Mark R. Spingler

- 10 Cross-interface Development – The Key to a New Cockpit Design

Thomas Beer, Martin Hinz

## INTERVIEW

- 16 »To Further Develop the Electrical/ Electronic Infrastructure of the Vehicle«

Dr.-Ing. Peter Rieth, Head of Systems & Technology at Continental's Chassis & Safety Division

## DEVELOPMENT

**Measuring Techniques:**

- 18 Innovative Vibration Measurement Technology for Brake Development

Holger Marschner, Dirk Reckwerth, Heinrich Steger

**Chassis:**

- 26 Vibration-optimized Components for Chassis Systems

Hendrik Sell, Tobias Ehart, Michael Meß

**Commercial Vehicles:**

- 32 An Optimized Transport Concept for Tractor-semitrailer Combination

Mauro Colombano, Ludovico Consano

## RESEARCH

**Sensorics:**

- 38 Structure-born Sound Transmission as an Important Influence on Crash Detection

Marinus Luegmair, Lucas Oestreicher
